

# Technology Enhanced Early Literacy Assessment Series

**Galileo®**  
**K-12**  
**Online**

Galileo® K-12 Online from ATI offers the Technology Enhanced Early Literacy (TE EL) Assessment Series. TE EL online assessments are aligned to state early-elementary (i.e., kindergarten and first grade) literacy standards. ATI's TE EL series utilizes technology enhanced items including sound and images to assess students in a friendly, early-elementary environment. The interactive TE EL assessments may be used to inform intervention planning to ensure students are progressing in the development of their literacy knowledge and skills.

## WHAT IS THE TE EL?

The TE EL series consists of four computer-presented assessments per grade level aligned to state early-elementary standards for kindergarten and first grade. The Progressively more comprehensive assessments are designed to assess the development of early literacy skills throughout the year. ATI recommends administering the assessments at the beginning of the school year, in late fall, in winter, and in spring. Some of the areas assessed by the TE EL series include:

- print concepts
- phonological awareness
- phonics and word recognition
- vocabulary acquisition and use
- comprehension of text

## ENGAGING, SELF-GUIDED ASSESSMENT

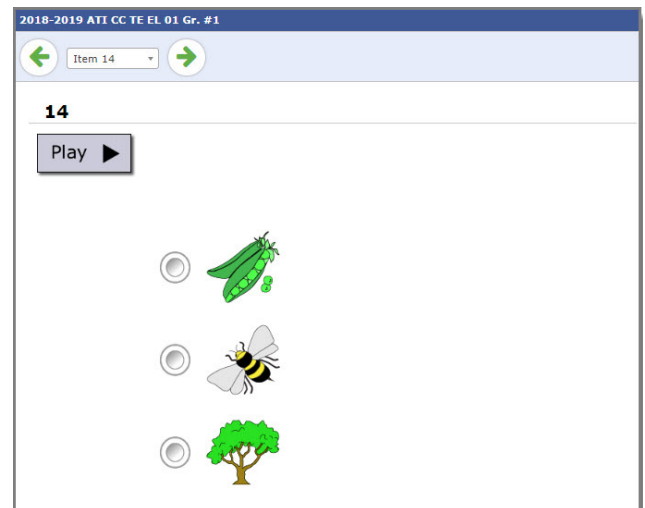

Each assessment is administered online via a computer with audio capabilities (i.e., sound card and speakers/headphones). Students are presented with a demonstration including clear audio instructions on how to take the assessment. Additionally, the student is given the opportunity to practice before taking the assessment. The TE EL may be administered to a whole class or to an individual child as an independent activity with minimal supervision.

## BENEFITS FOR ADMINISTERING TE EL ASSESSMENTS

- supports districts in responding to national and state initiatives related to early literacy by providing assessment activities targeting critical early literacy skills
- presents TE EL results data which may be used to guide instruction and intervention planning
- provides ability to forecast student performance on the statewide reading assessment at the end of third grade
- streamlines and standardizes the assessment process
- scores and records student responses automatically

TE EL ASSESSMENTS use TE items including sound and images to measure students' critical early literacy skills.
