

THE PORTRAIT OF CHILD OUTCOMES IS EXPANDING

Now with valuable data on school readiness goals

Assessment Technology Incorporated

The 2011-2012 **Head Start Portrait of Child Outcomes** will reflect children’s ongoing learning and progress in the 11 Domains and 37 Domain Elements comprising the **Head Start Child Development and Learning Framework**. Additionally, the Portrait will now include Galileo’s new **School Readiness Scale**. The *School Readiness Scale* pulls together goals from across the domains of language and literacy, cognition and general knowledge, approaches towards learning, physical well-being and motor development, and social and emotional development as defined in the Framework. The selected school readiness goals align with new Common Core Standards.

If not already a participant, you are invited to join in the expansion of the Head Start Portrait of Child Outcomes. The Portrait, initiated several years ago by Head Start programs throughout the nation, is a grass roots initiative in collaboration with Assessment Technology Incorporated (ATI) in which **Head Start programs join together, pool their data, and share information with the public**. The Portrait creates a vehicle to showcase the success of Head Start in promoting children’s learning and development while fostering school readiness skills.

Portrait data are automatically recorded online by Head Start programs and are available in real-time for reporting purposes. **As more programs participate, the database grows giving programs a stronger voice** in decisions occurring at the federal, state, and local levels.

Participation in the Head Start Portrait is completely voluntary. There is no cost or additional work involved in becoming a Portrait participant. To participate, programs must be entering outcome data on *Galileo G3 Assessment Scales* in Galileo Online and provide ATI with permission to include program data in the Portrait. Acceptance for inclusion means that data from the assessment scales in Galileo, as well as related demographic information, will be aggregated along with that of all other participating programs. This information will be presented in aggregated reports such as the *Development Profile* and *Progress Reports*. Aggregated demographic information will be presented in *Demographic Reports*. The Portrait does not provide any individual program reports, nor will any child’s name appear.

To view real-time data of participating programs today, click on **Portrait of Child Outcomes - Head Start Data** in the Pre-K Spotlight at **ati-online.com**.

To be included in the Head Start Portrait of Child Outcomes, please complete the information below and return completed form to ATI.

Yes, please include our program’s Galileo Online demographic and assessment data as part of the aggregated data for the Head Start Portrait of Child Outcomes. I understand my program name will be listed as a participant but no data specific to my program, classes, or children will be shared or identified.
